PROFESSIONAL SUMMARY

Graduate Software Engineer with a BSc in Mathematics & Computer Science and strong foundations in Java, Python, SQL, object-oriented programming and backend software development. Experienced building software applications, debugging code, analysing data and solving technical problems through structured programming. Passionate about clean code, continuous learning and developing scalable software solutions within Agile engineering teams.

EDUCATION

Bachelor of Science in Mathematics & Computer Science

University of South Africa (UNISA) — 2025

Key Modules:

Advanced Programming, Operating Systems, Artificial Intelligence, Linear Algebra, Numerical Methods, Discrete Mathematics, Differential Equations

CERTIFICATIONS

- Certificate in Entrepreneurial Generator – Wits Business School
 - PCAP – Certified Associate in Python Programming (Python Institute)
 - PCEP – Certified Entry-Level Python Programmer (Python Institute)
-

SOFTWARE & DATA PROJECTS

Space Invaders Game Development

- Developed a Python-based arcade game using object-oriented programming principles.
- Implemented gameplay mechanics, collision detection, scoring systems, and debugging improvements.
- Improved application performance through structured debugging and optimization techniques.

Java Development

- Designed and implemented object-oriented Java applications using classes, inheritance, collections and exception handling.
- Developed reusable backend logic and console-based applications following object-oriented design principles.
- Applied debugging and testing techniques to identify defects and improve application reliability.
- Used Git for version control and collaborated using structured development practices.

Esports Data Analysis

- Cleaned and analysed datasets using Python, SQL, and Power BI.
- Performed data validation and trend analysis to support reporting insights.
- Cleaned and analysed a dataset of over **10,000 records** using Python, SQL and Power BI.
- Built interactive dashboards to identify trends and performance insights.
- Performed data validation and quality assurance checks to improve reporting accuracy.

TECHNICAL SKILLS

Programming:

Java, Python, C++

Development:

Object-Oriented Programming, REST APIs, Backend Development Fundamentals, Debugging

Data & Databases:

SQL, Data Structures, Data Cleaning, ETL

Tools: Git, GitHub, Power BI, Linux, Windows

Relevant Skills: Software Testing, Problem Solving, Algorithms, Data Structures, Object-Oriented Design, Application Support, System Troubleshooting, Agile (Foundational).

EXPERIENCE

Volunteer / Mentor

Thusanani Foundation | 2014 – 2018

- Coordinated community outreach programmes and supported event logistics
 - Maintained and captured data to support administrative processes
 - Facilitated educational workshops to improve community awareness
 - Mentored students and supported transitions into higher education
-

Mathematics Tutor

Bono Foundation | 2015 – 2016

- Delivered mathematics tutoring to secondary school learners
 - Improved student understanding and academic performance
-

ACHIEVEMENTS

- Obtained 5 distinctions during Bachelor's degree
 - Top 20 student out of 420 learners
 - Recognised as Top Achiever (2015) – Thusanani Foundation
 - Mentored 5+ students into higher education institutions
-

Driver's Licence: Code C1

Availability: Immediately Available
